SANDEEP CHERIAN

SOFTWARE QUALITY ANALYST

PROFILE SUMMARY

Experienced Software Test Engineer and Project Management with a proven track record in the information technology and services sector. Expertise includes manual testing,Selenium pytest automation, SQL, and proficiency in Microsoft Excel and Word. Holds a Bachelor of Engineering (B.E.) degree in Computer Science and Engineering from PSN College of Engineering. Demonstrates strong analytical skills, attention to detail, and effective project management capabilities, contributing to successful software delivery and quality assurance.

WORK EXPERIENCE

2025 - 2026

Software Quality Analyst

Mevel technologies pvt ltd

Project: On-Demand Service Management Mobile App (Android & iOS) — A mobile app to find and book local service

professionals.

Performed regular functional, regression, smoke, and integration testing on Android and iOS mobile applications.

Checked everyday workflows like user sign-up, location tracking, job bookings, and the rating/review system.

Strong expertise in Usability Testing and UX Validation, validating user workflows, navigation, accessibility, error messages, consistency, and overall user experience.

Tested custom app screens and permissions for regular customers, workers, and property managers.

Used API testing to make sure employee licensing records and job statuses match the system database correctly.

Attended daily team meetings and worked closely with software developers to fix bugs quickly.

- Performed **end-to-end functional testing of Air Arabia airline reservation and flight management systems**, covering flight search, availability, booking, PNR creation, ticketing, seat selection, baggage, ancillary services, cancellation, rebooking, and refund workflows.
- Validated the complete **flight booking-to-ticketing lifecycle**, including fare calculation, taxes, discounts, passenger details, flight inventory, payment processing, ticket issuance, booking confirmation, and transactional data consistency.
- Tested critical **airline payment and transaction scenarios**, including successful/failed payments, payment timeouts, duplicate transactions, reversals, refunds, and reconciliation between booking, payment, and ticketing systems.
- Performed **integration and API testing** between reservation, flight inventory, payment gateway, ticketing, check-in, and passenger management systems using Postman, validating API responses, business rules, error handling, and data synchronization.
- Executed **SQL-based backend validation and comprehensive regression/UAT testing**, verifying PNR, passenger, flight, fare, payment, ticket, and transaction data while identifying and tracking critical defects through JIRA in collaboration with business and development teams.

2019 - 2024

Assistant QA Lead

MariApps Marine Solutions

Project: Marine ERP Accounts & Financial Management System — Enterprise software for global shipping companies including Maersk and Mitsui O.S.K. Lines.

Key Responsibilities & Achievements

- Led manual testing activities for large-scale Marine ERP applications used by international shipping organizations.
- Tested end-to-end Accounts & Financial Management modules including General Ledger, Trial Balance, Balance Sheet, Profit & Loss, Accounts Payable, Accounts Receivable, Vendor Payments, Payment Batches, Payment Vouchers, Bank Reconciliation, Exchange Rate Calculations, SWIFT Transfers, NEFT Payments, and reverse transaction scenarios.
- Validated payment processing workflows for both domestic and international transactions, ensuring accurate transaction lifecycle management, payment status updates, settlement processing, and financial reconciliation.
- Worked on payment domain testing involving international payment workflows and cross-border fund transfers, verifying transaction accuracy, beneficiary details, currency conversions, payment routing, and settlement processes.
- Participated in validating SWIFT payment message structures, including MT103 (Customer Credit Transfer), MT202 (Financial Institution Transfer), and MT202 COV (Cover Payments) by verifying mandatory fields, reference numbers, sender and receiver information, value dates, currencies, beneficiary details, and message formatting according to business requirements.

- Supported validation activities for ISO 20022 payment messages, including pacs.008 (Customer Credit Transfer) and pacs.009 (Financial Institution Credit Transfer), ensuring correct XML message structure, mandatory data elements, business rules, payment statuses, and interoperability with downstream systems.
- Participated in the complete Software Development Life Cycle (SDLC), from requirement analysis and sprint planning through testing, UAT support, release management, and production deployment.
- Designed, reviewed, and executed more than 100 comprehensive manual test plans, test scenarios, and test cases covering complex business workflows and integrations.
- Performed Smoke Testing, Functional Testing, Regression Testing, Integration Testing, System Testing, UAT Support, and Production Validation.
- Utilized Tricentis automation tools to automate repetitive test scenarios, improve regression coverage, and reduce manual testing effort.
- Developed and maintained test scripts based on newly introduced features and enhancement requests.
- Validated data migration activities and ensured data integrity across multiple ERP modules.
- Executed SQL queries to verify backend database records and reconcile financial transactions with application reports.
- Managed defects using Azure DevOps (TFS), JIRA, and HP ALM, tracking issues from identification through validation and closure.
- Prioritized and managed defects based on severity, business impact, and release timelines.
- Conducted defect triage meetings, analyzed recurring failures, and implemented preventive measures

using reusable test assets to reduce future production issues.

- Participated actively in Agile Scrum ceremonies including Daily Stand-ups, Sprint Planning, Sprint Reviews, Retrospectives, and Release Readiness meetings.
- Prepared release notes, coordinated build deployments.
- Architected and executed automated regression suites using Python, Selenium WebDriver, and Pytest, while authoring and maintaining central framework documentation, test plans, and execution workflows on Confluence.
  Automated test pipeline runs and configured Pytest reporting hooks to export execution metrics, failure logs, and visual evidence directly to structured SharePoint repositories for stakeholder visibility.
  Streamlined quality delivery by mapping automated Pytest test coverage to functional specifications in Confluence and managing version-controlled test data sets, templates, and QA sign-off artifacts on SharePoint.

2018 - 2019

Quality Analyst Project Coordinator
Iroid Technologies

Project 1: UIIC Insurance Application (Web-Based Insurance Management System) Domain: Insurance Performed end-to-end manual testing of insurance web applications covering policy management, customer onboarding, claims processing, legal approvals, renewals, endorsements, and policy cancellations. Developed and executed comprehensive test plans, test scenarios, test cases, and test data based on business and functional requirements. Conducted API Testing using Postman, validating request/response structures, HTTP status codes, authentication, business rules, and backend data consistency. Performed SQL backend

verification to validate data accuracy, integrity, and identify duplicate records across policy, customer, claims, and transaction databases. Executed Boundary Value Analysis (BVA), Equivalence Partitioning, and Negative Testing to ensure robust validation of insurance workflows. Conducted Smoke Testing, Sanity Testing, Functional Testing, Regression Testing, and Retesting during multiple release cycles. Performed comprehensive validation of premium calculations, claim settlements, policy endorsements, and payment transactions. Participated in Agile Scrum and Waterfall project methodologies, collaborating closely with Business Analysts, Developers, and Product Owners. Identified, documented, tracked, and verified defects using defect management tools, ensuring timely resolution and quality delivery. Validated cross-browser compatibility across Chrome, Firefox, Edge, and Safari environments. Conducted User Acceptance Testing (UAT) support and coordinated with stakeholders to ensure business requirements were met. Performed backend verification to ensure data synchronization between UI, APIs, and databases. Worked in fast-paced project environments supporting both domestic and international stakeholders. Contributed throughout the Software Testing Life Cycle (STLC), from requirement analysis through production deployment. Project 2: PickMyPartner Web & Mobile Application Domain: Matrimonial / Social Networking Tested web and mobile applications for user registration, profile creation, partner search, subscription management, messaging, and matchmaking functionalities. Executed comprehensive functional, integration, system, and end-to-end testing across Android, iOS, and web platforms. Validated responsive UI/UX behavior across multiple screen sizes, browsers, and mobile devices. Performed API Testing using Postman to verify user registration, login, profile updates, subscription purchases, and

search functionalities. Conducted SQL database validation to verify data accuracy, duplication checks, profile information consistency, and transaction records. Executed Smoke Testing, Sanity Testing, Regression Testing, Retesting, and comprehensive test execution for every sprint and release. Applied Boundary Value Analysis (BVA) and Equivalence Partitioning techniques to validate input fields and business rules. Tested payment gateway integrations, subscription plans, notification services, and messaging functionalities. Logged and tracked defects, collaborating closely with developers to ensure quick resolution and high product quality. Participated in Agile ceremonies including Sprint Planning, Daily Standups, Sprint Reviews, and Retrospectives. Supported User Acceptance Testing (UAT) and production validation activities. Ensured seamless integration between frontend, backend APIs, and databases through detailed verification activities. Worked effectively in dynamic, fast-paced environments with changing business priorities and release schedules. Additional QA Leadership & Project Coordination Experience Coordinated project activities across QA, Development, Business Analysis, and Support teams. Conducted daily and weekly status meetings, gathered progress updates from team members, and reported project status to management. Assisted in project planning, effort estimation, risk identification, and release coordination. Managed communication.

2015 - 2018

Quality Analyst

TechWyse Internet Marketing

Project: SEO & Digital Marketing Websites & AdLuge CRM Platform

Tested and validated SEO-focused websites and digital marketing platforms for Canadian clients, ensuring compliance with approved business

requirements, design mockups, and usability standards.

Performed end-to-end functional, UI/UX, content, and cross-browser testing across modern web browsers.

Verified keyword ranking reports, website performance metrics, customer data, and workflow processes within the AdLuge CRM platform.

Participated in the complete Waterfall Software Development Life Cycle (SDLC), collaborating with Business Analysts, UX Designers, Developers, SEO Specialists, Project Managers, and Clients.

Reviewed client-approved design mockups and business requirements to ensure website implementations matched approved specifications.

Conducted testing of WordPress-based websites, validating plugins, SEO configurations, SSL certificates, HTTPS implementation, content accuracy, and responsive design behavior.

Identified, documented, tracked, and communicated defects using detailed bug reports, ensuring timely resolution by development teams.

Executed regression, functional, integration, user interface, and user acceptance testing (UAT) validation before production deployment.

Maintained QA checklists and test documentation, ensuring all quality standards were met before sign-off.

Coordinated release readiness by providing QA completion reports and sign-off communications to Project Managers, Team Leads, Developers, Designers, and Stakeholders.

Verified website content provided by SEO teams, ensuring consistency, accuracy, and compliance with client requirements.

Supported production releases by validating website functionality, design consistency, SEO readiness, and overall user experience.
